When the Heat is on, It Performs

*Actual lab thermal image photo

SuperCapSR™ patent-pending technology creates a molecularly-fused color layer that becomes integral to the profile.

- Historically, darker colored vinyl windows have had problems with heat build-up—not only in hot climates, but in most direct sun conditions
- Born from military infra-red heat-reflective technology, the SuperCapSR™ exterior color technology absorbs less heat to prevent profile distortion
- Patent-pending technology that creates a tough molecularly-fused acrylic color layer to become integral within the profile
- Durable colors—won't crack, chip, flake or chalk like paint
 - Accelerated lab and real-world weathering test-proven
 - Meets applicable AAMA durability and weathering standards
- Profiles backed by a 20 year warranty for dimensional performance —10 years on color fade
- Five exterior colors: bronze, hunter green, sand, brick red, eggshell —chosen to match popular clad-wood window colors

Builder, Contractor and Homeowner Benefits

- Colors that match popular clad-wood colors provide more flexibility to “value-engineer” upscale window/house packages
- Highly scratch-resistant color layer handles job-site abuse better than paint = saves time and cost
- Color is integrated into the profile = never needs painting; fade-resistant

Mikron Service Advantage

- Industry “Gold Standard” in On-time and Ship-Complete performance
- Short leadtimes for PVC profiles
- Dedicated, quick response Customer Service staff in every Mikron location
- Value-added Services to build your profitability:
 - Technical & Manufacturing consulting to maximize your efficiencies
 - Customized Marketing assistance tailored to your specific markets
